

LEED FOR HOMES PROVIDER

LEED FOR HOMES

LEED for Homes is a voluntary, points-based green building certification system developed by the US Green Building Council (USGBC) that was launched in the early 2000s. LEED-certified homes are designed and built to address not only energy efficiency, but additional key conservation criteria such as water and material usage, indoor air quality, landscape, and community. LEED for Homes certification demands attention to detail and an engaged, experienced team.

PROVIDERSHIP

As your LEED-H Provider, BER will provide project support right from the outset, with the option to register projects with the USGBC on your behalf. We provide quality assurance on each project, reviewing documentation and identifying opportunities throughout the building process, offering technical assistance, and performing field assessments as required to ensure success at the final certification stage. We then submit the final documentation to the USGBC for final certification.

In addition to project certification support, BER provides professional support to you as a Green Rater, keeping you up to date on program changes and offering ongoing training and oversight. If you are new to LEED for Homes, we can guide you through the process of becoming a Green Rater. By bringing both HERS and LEED Homes Providerships under one roof, BER furthers its mission to offer streamlined services, tech support and quality assurance. This equals time and money savings for you and your clients. Contact us today to get started.

Become a LEED Green Rater with help from BER. Read our step-by-step guide at theber.com.
